

HOW TO CARE FOR YOUR TREE

Choose a location

Select the perfect site away from heaters and fireplaces, which will dry out the tree and turn the tips brown and crispy. Please clear this area in preparation for your tree. We provide a drip tray which will be placed underneath the pot. You may want to provide additional protection for your floor, in case the drip tray overflows.

Water your tree

We recommend approximately 2 cups of water each day or two, but check the soil moisture with your fingers first. If the soil is moist there is no need to water that day. Keeping your tree properly hydrated keeps the needles soft and prevents them from dropping. Pour slowly around the base of the tree so the soil is moistened and water is absorbed evenly.

Decorate your tree

Have fun decorating your tree as you see fit! We only ask that you do not use tinsel, flock or sprays as these are nearly impossible to remove and can damage the tree. We recommend using LED lights as they are energy efficient and do not give off heat which will dry out the tree.

Maintain your tree

We ask that you do not trim your tree or feed it plant food. Don't forget to water!

Prepare to say goodbye!

Please remove all lights and decorations from your tree prior to pick-up. We will contact you to arrange a date and time. Until next year!
